

# Don't Panic

*What to Do If You've Still Got Hundreds of Forms 3.0 Applications*

*Bill Pribyl/DataCraft*

*HOUUG 18 September 1996*

Presentation available at [www.datacraft.com](http://www.datacraft.com)

*Look under Tips -> Forms Upgrade*

## Quasi Agenda

What to do, what to do...

SQL\*Forms 3.0

How long can I keep it?

Can it run against new server versions?

Forms 4.5

What are my upgrade options?

What about third-party converters?

Web Forms & Sedona

Why do I care about these technologies?

How do they impact my Forms decision?

Alternatives

What else should I be looking at?

How do the alternatives work?

## Sources and Credits

Client experiences, 1991 - present

Telephone interview with Ben Wright/Oracle, Aug 96

Oracle Tech Support

DataCraft research on intranet development tools, Summer 96

Gartner Group research, 1995

"Database Publishing on the Web & Intranets" by Curt Lang and Jeff Chow (Coriolis, 1996)

"Web Database Tools," PC Magazine 10 Sept 96, partially at [www.pcmag.com/iu/features/1515/dbase/dbase\\_o.htm](http://www.pcmag.com/iu/features/1515/dbase/dbase_o.htm)

Many referenced product names are trademarked by their owners

## Discussion

How many .frm files do you have?

- ▶ *500*
- ▶ *1000*
- ▶ *5000*

## Discussion

What % of your users have:

- ▶ *PCs of any type?*
- ▶ *PCs with 32-bit O/S & 32 meg memory?*
- ▶ *Only terminals?*

## Discussion

- ▶ Are the key decision factors:  
*Economic?*  
*Political?*

==> Forms 3.0...for a while longer

Forms 4.5

Web Forms

Something else

# The Lifecycle Matrix

From Bulletin 9250094.61

Product	When	Lifecycle Phase	Oracle Development	Oracle Worldwide Support
Developer 2000 w/ Oracle Forms 4.5 & Oracle Reports 2.5	now	Active	Enhancements & Maintenance	Customer Care Support
SQL*Forms 3.0/ SQL*Menu 5.0 and SQL*Reportwriter 1.1	through 12/31/96	Mature	Critical Fix Maintenance	Customer Care Support
SQL*Forms 3.0/ SQL*Menu 5.0 and SQL*Reportwriter 1.1	1/1/97 to 12/31/99	Functionally Stable	No Support	Extended Assistance Support
SQL*Forms 3.0/ & SQL*Menu 5.0 and SQL*Reportwriter 1.1	after 12/31/1999	Obsolete	No Support	No Support

## Bad News

Forms 3, Menu 5, and Reportwriter 1.1:

- ▶ *Are not part of the Oracle 7.3 distribution*
- ▶ *Last shipped in 7.2*
- ▶ *Get no bug fixes after December 31, 1996*

## Good News

Until the end of the millenium, Oracle will:

- ▶ *Answer questions on these products*
- ▶ *Provide problem workarounds where possible*
- ▶ *Offer upgrade assistance*

...with no fees beyond regular maintenance

Oracle's name for this is "Extended Assistance Support"

I Want to Run SQL\*Forms 3.0 and Oracle 7.3!

Not to worry!

*Forms 3.0 WILL run with server 7.3 in an  
Oracle-supported configuration...*

1. Install Oracle 7.3 with desired options
2. Install Oracle 7.2 tools and database on a separate machine or in a separate ORACLE\_HOME
3. Be sure SQL\*Net 2.x or greater is installed and configured
4. Set users' environment variables:
  - ▶ *ORACLE\_HOME* and *PATH* use 7.2 settings
  - ▶ *TWO\_TASK* is the 7.3 database's TNS name

# Conventional Approach

```
#!/bin/sh
```

```
# save old ORACLE_HOME to strip from PATH  
OLDHOME=${ORACLE_HOME:-$PATH}
```

```
# make the new settings  
ORACLE_HOME=/u01/app/oracle/product/7.3.2 ; export ORACLE_HOME  
ORACLE_SID=PROD ; export ORACLE_SID  
unset TWO_TASK
```

```
# Don't make any assumptions about what's in $PATH
```

```
case "$PATH" in  
  *$OLDHOME/bin*)      PATH=`echo $PATH | \  
                        sed "s;$OLDHOME/bin;$ORACLE_HOME/bin;g" ` ;;  
  *$ORACLE_HOME/bin*) ;;  
  *:*)                 PATH=${PATH}$ORACLE_HOME/bin: ;;  
  "")                  PATH=$ORACLE_HOME/bin ;;  
  *)                   PATH=$PATH:$ORACLE_HOME/bin ;;
```

```
esac
```

```
export PATH
```

# Host-Based Client/Server Approach

Uses TWO\_TASK

```
#!/bin/sh

# First set TWO_TASK to the TNS name of the 7.3 database
TWO_TASK=prod.houston.datacraft.com ; export TWO_TASK

# Now for safety remove ORACLE_SID so no BEQ connections possible
unset ORACLE_SID

# save old ORACLE_HOME to strip from PATH
OLDHOME=${ORACLE_HOME:-$PATH}

# Use the 7.2 distribution to use Forms, Menu, and Reports
ORACLE_HOME=ORACLE_HOME=/u01/app/oracle/product/7.2

# Don't make any assumptions about what's in $PATH
case "$PATH" in
  *$OLDHOME/bin*)      PATH=`echo $PATH | \
                        sed "s;$OLDHOME/bin;$ORACLE_HOME/bin;g"` ;;
  *$ORACLE_HOME/bin*) ;;
  *:*)                PATH=${PATH}$ORACLE_HOME/bin: ;;
  "")                 PATH=$ORACLE_HOME/bin ;;
  *)                  PATH=$PATH:$ORACLE_HOME/bin ;;
esac

export PATH
```

### Benefits

---

- + No application changes required
- + No expensive PC upgrades required
- + Buys more time to decide what to do next
- + Gives market a chance to invent new technology

### Risks

---

- No guarantee of continued O/S support
- Oracle will want to discontinue Oracle7 support 18 mos. after Oracle8 ships
- Users tend to want GUIs

Forms 3.0...for a while longer

Forms 4.5

Web Forms

Something else

## Forms 4.5

## Considering Character Mode Runtime

	Forms 4.5 char mode	Forms 3.0/Menu 5.0
Designer i/f	GUI only	char mode only
Trigger behavior	on-new-field-instance fires on nav...infinite loops likely	can navigate & in out of field in o-n-f-i
Runtime LOV	Auto-reduce by default	N/A
Runtime keys	Slightly different (can be changed w/ Oracle Terminal)	
Forms messages	Some new phrasing. Example: "Do you want to save"...	...instead of "Do you want to commit"
Command-line syntax	Slightly different (can be "wrapped")	
Menu security	Use Oracle server roles	Uses SQL*Menu roles
Screen size	Adapts to window size	Fixed at 80 or 132x24
V2-style triggers	STILL supported!	Supported

1. First upgrade forms and modules at the root of your "dependency tree" for referenced and called Forms
2. `f45gen <module-name> <username/password>`  
*(Produces .fmb file and .fmx file by default)*
3. Eliminate navigation in on-new-field-instance triggers
4. Test until you're happy
5. Revise default key map using Oracle Terminal, or retrain users

The simple upgrade process is well-documented elsewhere:

- ▶ *<http://www.oracle.com/products/developer2000/upgrade/html/index.html>*

Most Forms conversion literature overemphasizes key- and mouse-navigation issues

Real issues are more than skin deep

# Upgrading to Forms 4.5 GUI

Is This YOUR Company?

Expert:  
"You'd do  
better to  
re-engineer"

Management:  
"Give us a  
cheap & dirty  
upgrade"

Users:  
"This  
stinks!"

Management:  
"Re-engineer"

This pattern is repeated in virtually every Oracle shop that upgrades from 3.0 to GUI Forms

1. Train a small team in Forms 4.5
2. Select a pilot project
3. Select upgrade approach(es) to evaluate

<i>Converter + manual cleanup</i>	<i>Modest inclusion of GUI features</i>
<i>Simple one-to-one upgrade</i>	<i>Complete re-engineer</i>
4. Establish and document GUI standards as you go
5. Collect metrics for follow-on project sizing

Use this juncture to convince management to use Designer/2000

Get your development team organized around repository-based tools

Inventory existing applications... take out the trash!

Use both reverse- and forward-engineering to reuse and rebuild as appropriate

# Upgrading to Forms 4.5 GUI

## What About Third Party Converters?

- ▶ May be a good match for some applications
- ▶ Conversion technology cannot re-engineer for total GUI look and feel
- ▶ Only one product on market (Kumaran)  
*No competition*  
*First two megabytes converted: \$9,200*  
*Cheaper to convert by hand?*
- ▶ License does not allow for mistakes

## Analysis

## Forms 3.0, 4.5 Character Mode or GUI?

	Forms 3.0	Forms 4.5 Character	Forms 4.5 GUI
Main Impact	DBA	Developers	Everyone
Risk	Low	Lowest	Medium
Cost	Lowest	Low	High
Position	Buys time	Possible interim step	Pilot

Forms 3.0...for a while longer

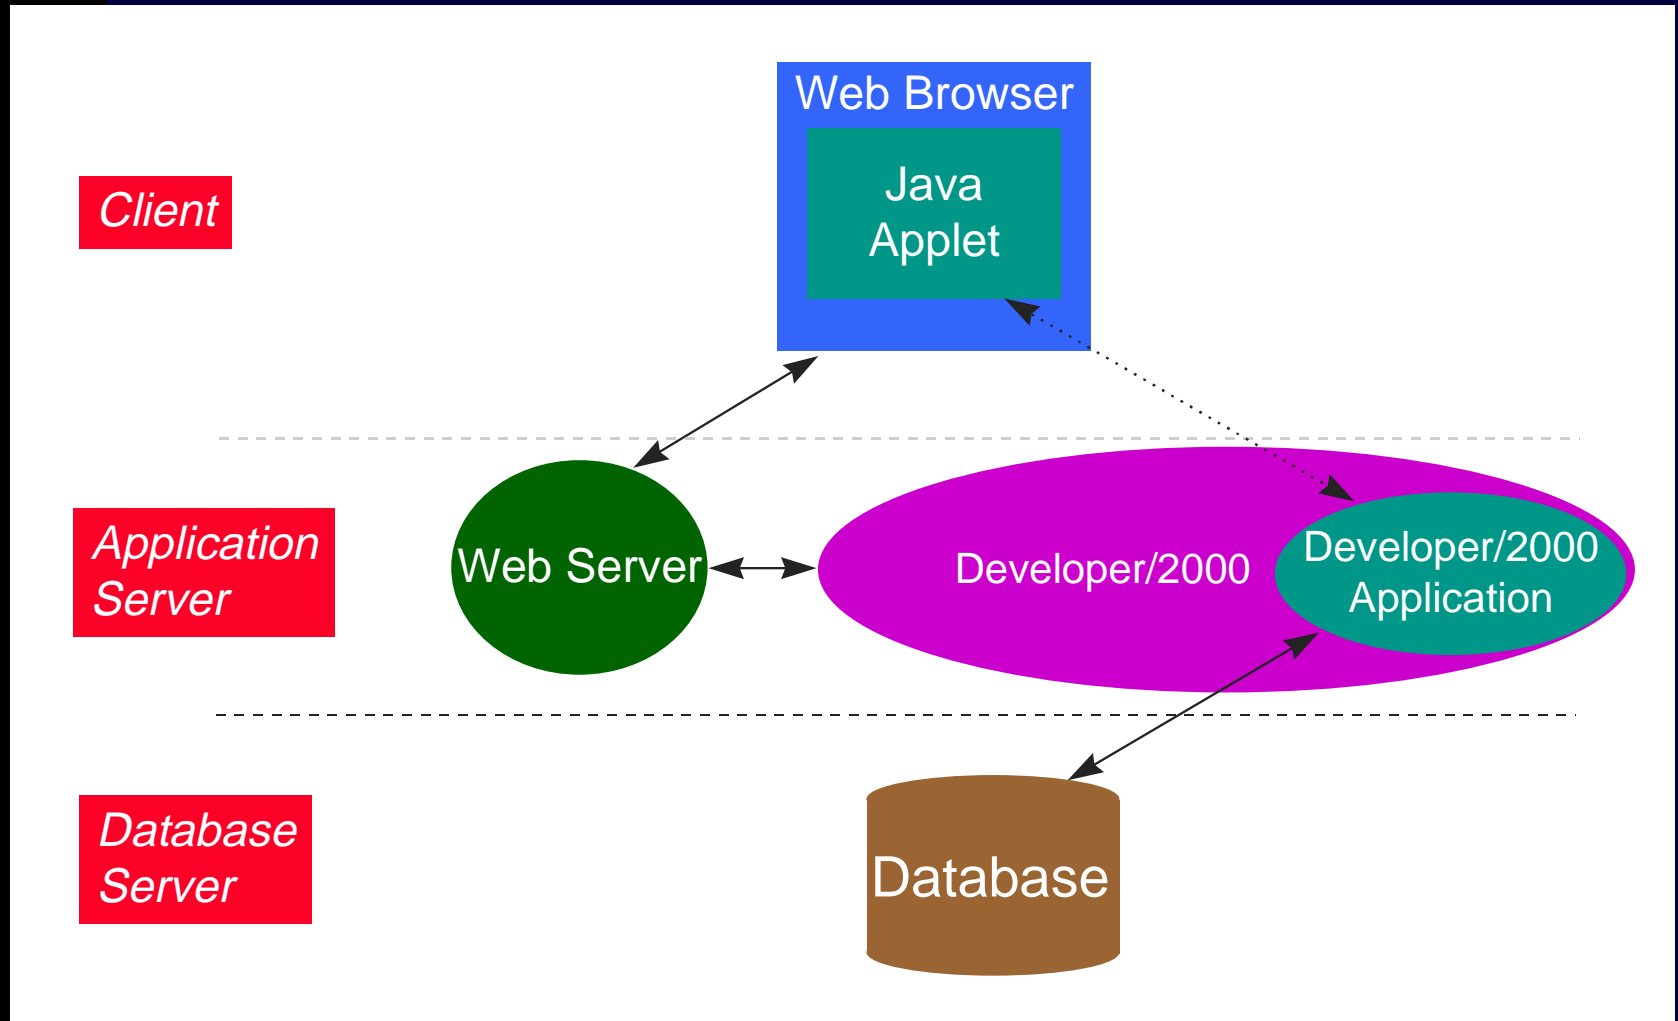

Forms 4.5

Web Forms

Something else

# What is "Web Forms"?

From [www.oracle.com/promotions/intranet/html/devapp.html](http://www.oracle.com/promotions/intranet/html/devapp.html)

Mostly economic reasons...

- ▶ *Client/server costs double those of mainframe*
- ▶ *PC "total cost of ownership" can be more than \$10,000/year*
- ▶ *Thin clients can be 75% cheaper!*

...some are personal...

- ▶ *Microsoft attitude is driving users away*

...and there is the halo effect

- ▶ *Internet makes it cool to be a geek...so bring an intranet to work!*

# Preparing Forms 3.0 Apps for Web Forms

## 1. Convert to 4.5 GUI

- ▶ *Conversion issues virtually identical*
- ▶ *Avoid when-mouse-enter, when-mouse-leave*
- ▶ *Don't use on-mouse-move trigger*

## 2. Wait

## Web Forms Project Status

- ▶ Development team readied demo for Larry Ellison August 19

*Ran on various platforms such as Netscape Navigator and the NC*

- ▶ Product release due "late 1Q97 or early 2Q97"

*But before Web Forms there will be Forms 5.0...*

At least:

- ▶ *Improved scalability*
- ▶ *Better OCX support*
- ▶ *Easier logic partitioning between client & server*
- ▶ *Developer productivity tools such as wizards*
- ▶ *An object library*

Scheduled release 1Q97

## And What About... Sedona?

Sedona is "an object component-based development framework supporting object standards such as OLE, Java, CORBA, Smalltalk, OpenDoc, and C++"

Will alter the way we build Forms applications

- ▶ *Will serve as repository for Developer/2000 "parts"*
- ▶ *Will alter design approach for reusable components*
- ▶ *Increases granularity of source and version control*

# Sedona...

## Components

- ▶ *Active repository for store & manage objects*
- ▶ *Object Factory component generator*
- ▶ *Object Mediator middleware*

As of Oct 95, was to ship Summer 96; now  
"with Oracle8"

Have a look at:

- ▶ *<http://www.infoworld.com/cgi-bin/displayArchives.pl?30java.htm>*

# Analysis

## Upgrade Options and Future Technologies

	Forms 3.0	Forms 4.5 Char	Forms 4.5 GUI	Web Forms	Sedona
When?*	Now	Now	Now	Mid-97	Late 97
Main Impact	DBA	Developers	Everyone	DBA/sys admin	Developers
Risk	Low	Lowest	Medium	High	Very high
Cost	Lowest	Low	Highest TCO	Low TCO after upgrade	Unknown
Position	Buys time	Interim step	Pilot first	Monitor closely**	Wait and see

\*Futures are guesses

\*\*Go to SCOUG mtg in January

# Do We Really Want to Continue with Forms?

## Yes

- + Generally efficient for developers  
*Especially when used in combination with Designer/2000*
- + Well-integrated with server
- + If you're already using PL/SQL, why learn a new language?
- + Maintained by very sharp people at Oracle

## No

- Much more proprietary than Oracle Server
- Locks us in to Oracle's upgrade path
- Cost of 3.0 to 4.5 GUI upgrade raises fears about next major release
- Tends to lag more than one technology curve
- May ultimately make us dinosaurs

You WILL re-engineer Forms 3.0 apps if you want successful GUI apps. So why not consider...

Forms 3.0...for a while longer

Forms 4.5

Web Forms

==> Something else

Attributes of the ideal corporate application development tool:

- ▶ *Standards-based (not just SQL and HTML!)*
- ▶ *Available from multiple vendors*
- ▶ *Requires no special client software*
- ▶ *Within the grasp of the average programmer*
- ▶ *Specifically tuned for database application development*
- ▶ *Industrial strength*

(You could also look for an off-the-shelf application)

What kind of Internet access do you have?

- ▶ *T1 or other high speed*
- ▶ *ISDN from work*
- ▶ *ISDN from home*
- ▶ *28.8 from work*
- ▶ *28.8 from home*

Does your company have an intranet...

- ▶ *Planned?*
- ▶ *Under development?*
- ▶ *In production?*

# Tools and Technologies

## Some Representatives

	Standards-Based	Vendors	Client	Learnable	Productive	Ind. Strgth
Dev2K, P-builder, Delphi	some	one	prop.	eventually	very	yes
WebServer	some	one	browser	yes	when generated	probably
CGI w/ perl	yes	yes	browser	yes	moderate	no
Visual Basic	de facto	one	MS	somewhat	moderate	can be
C++, ActiveX	not class libraries	several	MS	maybe not	depends	can be
Java	de facto	many	browser	somewhat	not yet	not yet
JavaScript	in progress	many	browser	yes	fair	not yet

Cold Fusion	part	one	browser	yes	yes	no
NetDynamics	part	one	browser	yes	yes	yes
jdbcKona/T3	mostly	one	browser	as Java	as Java	not yet

## Issues in Web-Database Integration

Web connections are sessionless

Pooled cache of waiting connections =>  
security risks

Three tier performance and troubleshooting

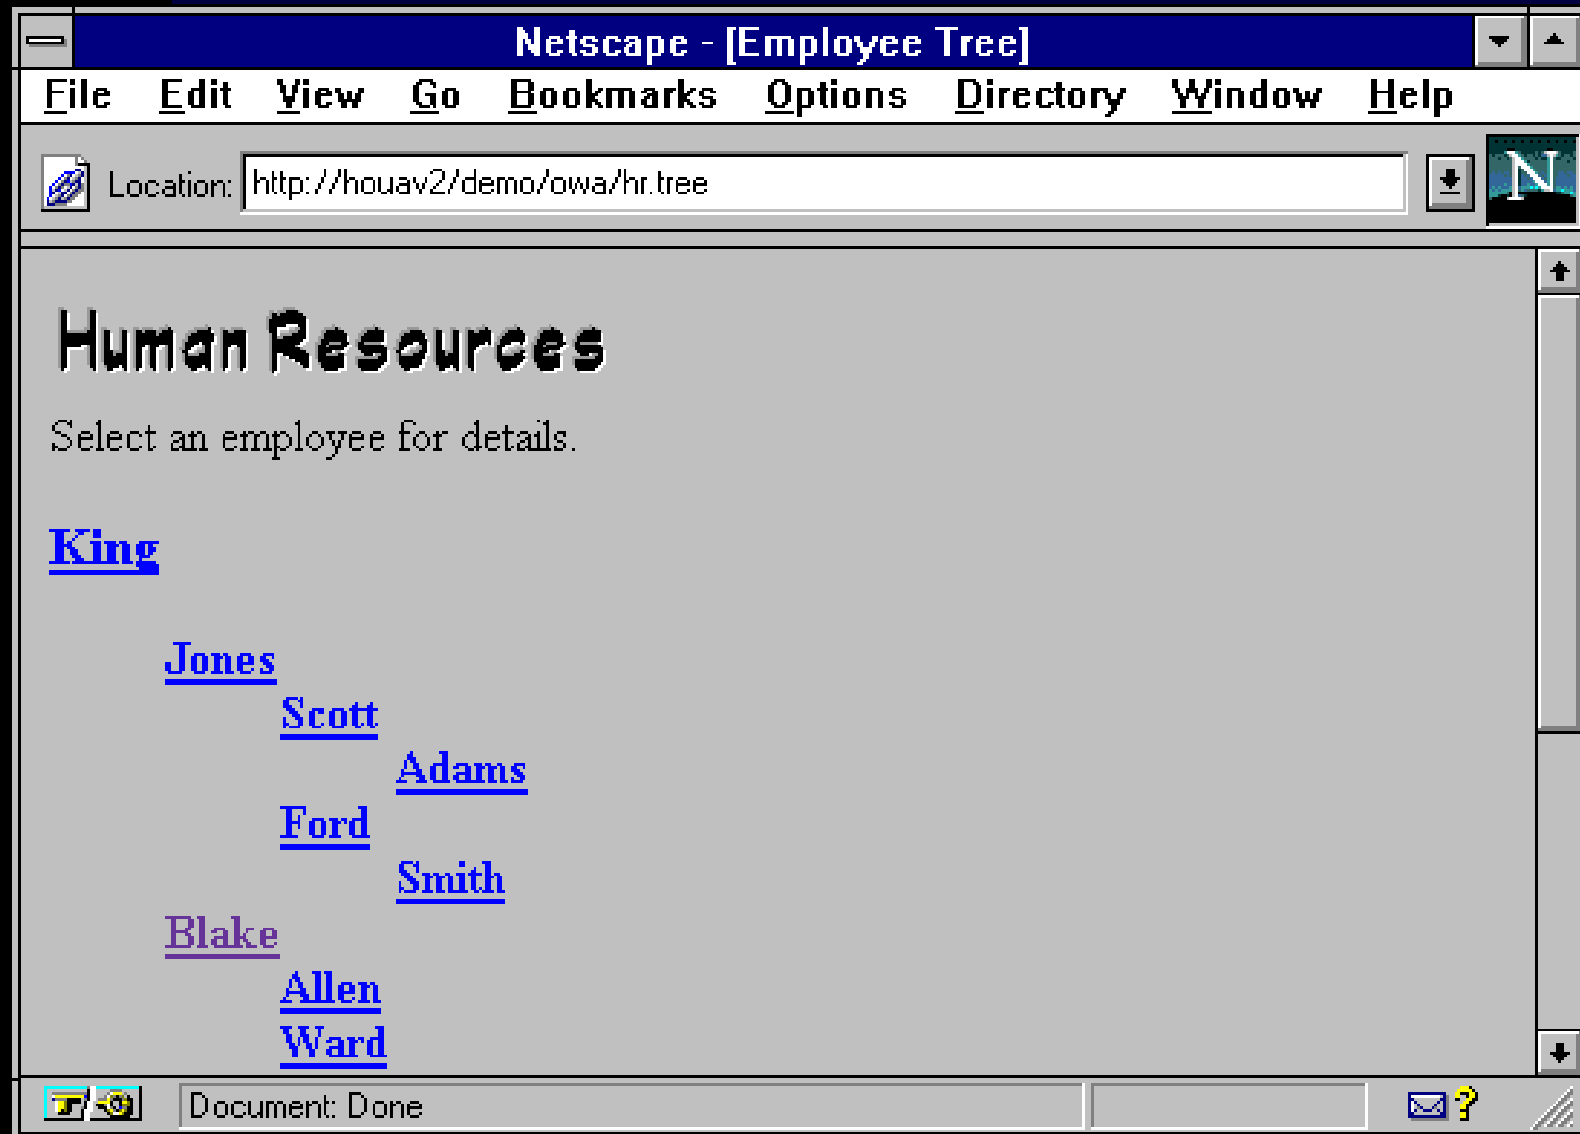

Some tools are young even in web-years

Support for stored procedures & all parameter  
types

A long list of tools:

<http://www.stars.com/Vlib/Providers/Database.html>

```
procedure tree (itop in varchar2) is
  cursor emp_tree (this_mgr number) is
    select empno,ename,mgr,hiredate,sal,comm,level,deptno from emp
    connect by prior empno = mgr start with empno = this_mgr;
  prev_level number := 1;
  ntop emp.empno%type;
  cbuf varchar2(255);
begin
  prolog('Employee Tree');
  http.p('Select an employee for details.');
```

if itop is not null then  
 ntop := to\_number(itop);  
else  
 ntop := ceo;

```
end if;
for e in emp_tree(ntop) loop
  while e.level < prev_level loop
    http.ulistClose;
    prev_level := prev_level - 1;
  end loop;
```

```
while e.level > prev_level loop
    http.ulistOpen;
    prev_level := prev_level + 1;
end loop;
cbuf := http.anchor('hr.person?iempno=' ||
    to_char(e.empno), initcap(e.ename));
if is_me(e.ename) then
    cbuf := cbuf || ' (This is you)';
end if;
if e.level = 1 then
    http.header(3, cbuf);
else
    http.bold(cbuf);
    http.nl;
end if;
end loop;
while prev_level > 1 loop
    http.ulistClose;
    prev_level := prev_level - 1;
end loop;
epilog;
end;
```

# Generated HTML

```

# WebServer Comments

## Advantages

---

- + With Designer/2000, can generate web applications\*
- + Allows use of PL/SQL, Java, SSI, custom via API
- + WRB allows use of non-Oracle web server

## Disadvantages

---

- Very low market share (0.02% on Internet)
- Code-heavy
- Apps may be totally locked in to Oracle
- Only recently did Oracle begin using it at [www.oracle.com](http://www.oracle.com)

\*Read-only now; r/w transactions in Rel. 1.3W (Nov/Dec 96)

## It's a Java World

## Terms

Java

Portable, object-oriented, adaptable programming language trademarked by Sun

JavaScript

Client-side form allows programmatic interaction and control of web pages

LiveWire

Server-side form of JavaScript that links Netscape web servers with database servers

JDBC

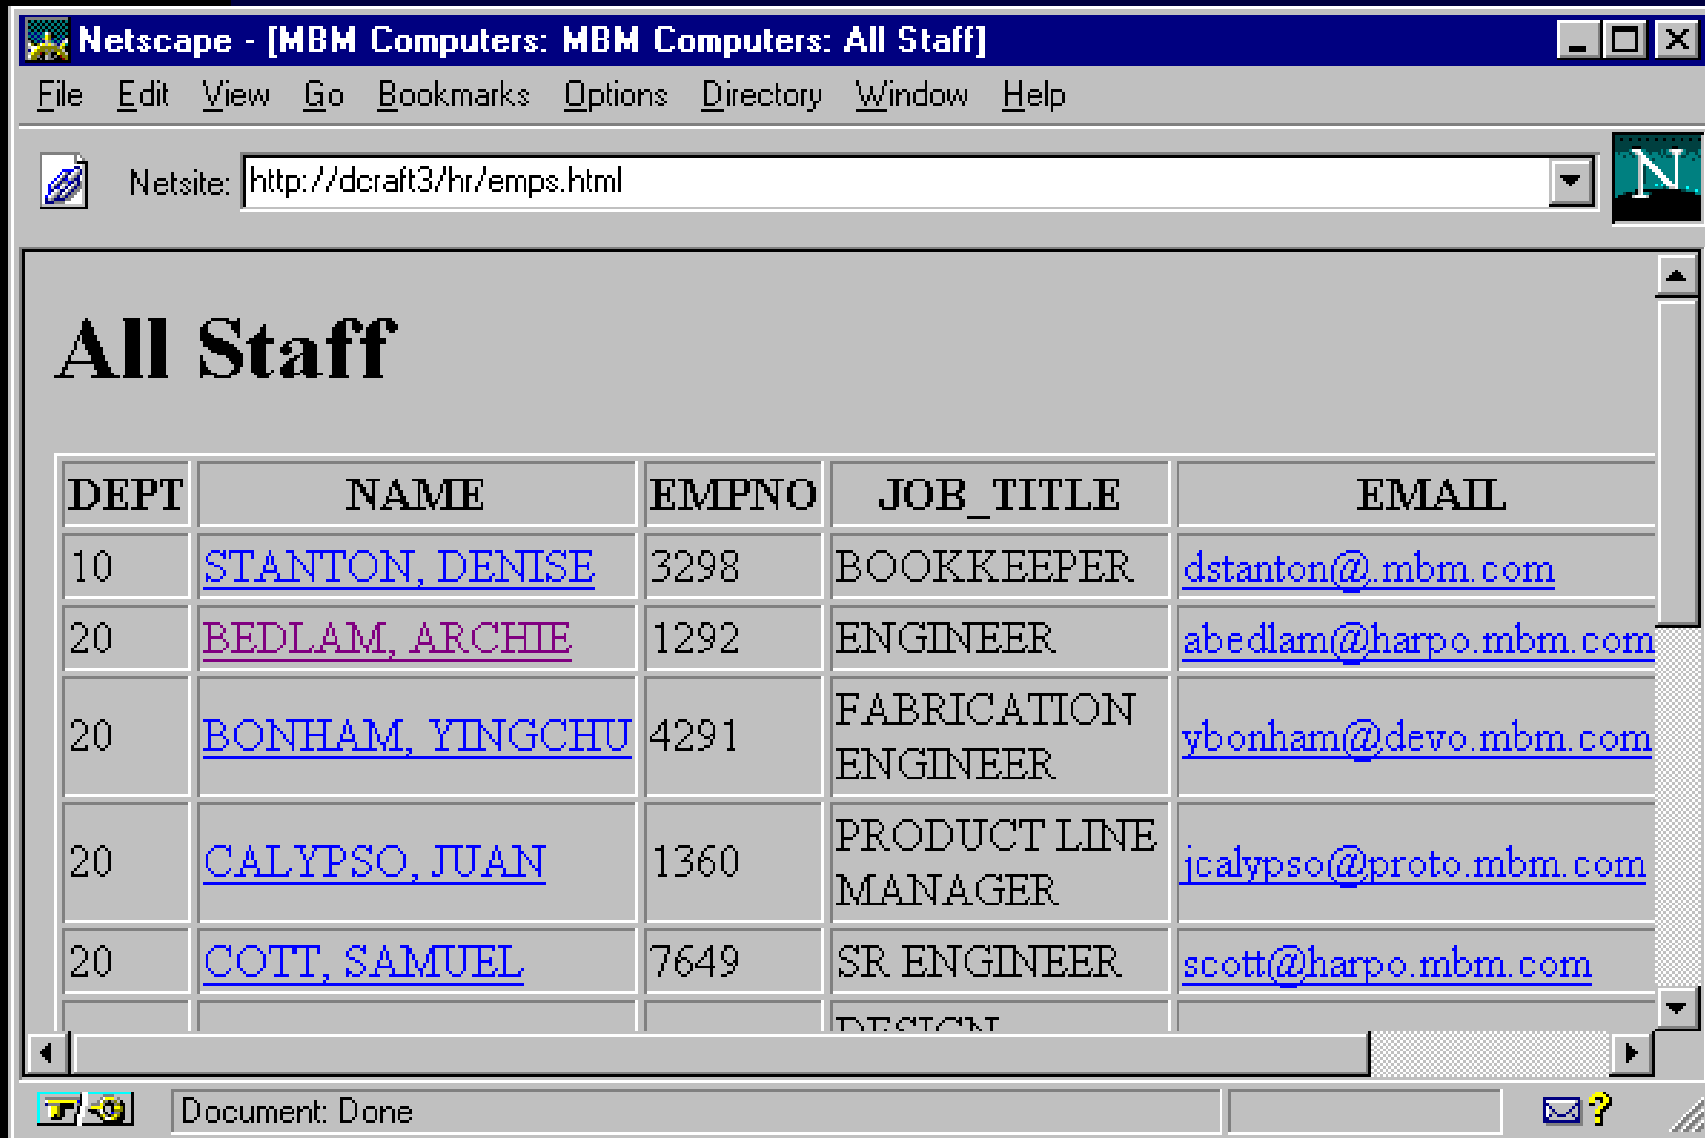

Java Database Connectivity: an emerging standard to link Java with databases

JDBC-ODBC  
bridge

PC software for linking JDBC calls with databases via ODBC

Java Beans

(In work) Set of Java APIs to facilitate Java component reuse

The screenshot shows a Netscape browser window with the title bar "Netscape - [MBM Computers: MBM Computers: All Staff]". The address bar contains "http://dcraft3/hr/emp.html". The main content area displays the heading "All Staff" and a table with the following data:

DEPT	NAME	EMPNO	JOB_TITLE	EMAIL
10	<a href="#">STANTON, DENISE</a>	3298	BOOKKEEPER	<a href="mailto:dstanton@mbm.com">dstanton@mbm.com</a>
20	<a href="#">BEDLAM, ARCHIE</a>	1292	ENGINEER	<a href="mailto:abedlam@harpo.mbm.com">abedlam@harpo.mbm.com</a>
20	<a href="#">BONHAM, YINGCHU</a>	4291	FABRICATION ENGINEER	<a href="mailto:ybonham@devo.mbm.com">ybonham@devo.mbm.com</a>
20	<a href="#">CALYPSO, JUAN</a>	1360	PRODUCT LINE MANAGER	<a href="mailto:jcalypso@proto.mbm.com">jcalypso@proto.mbm.com</a>

# WebLogic's Approach

From [www.weblogic.com](http://www.weblogic.com)

# WebLogic Code Fragment

Defines and calls Oracle stored procedure

```
Statement stmt1 = conn.createStatement();
stmt1.execute("CREATE OR REPLACE PROCEDURE proc_squareInt " +
              "(field1 IN OUT INTEGER, field2 OUT INTEGER) IS " +
              "BEGIN field2 := field1 * field1; " +
              "field1 := field1 * field1; END proc_squareInt");
stmt1.close();

CallableStatement cstmt1 = conn.prepareCall("BEGIN proc_squareInt(?, ?); END;");

cstmt1.registerOutParameter(2, Types.INTEGER);
for (int k = 0; k < 100; k++) {
    cstmt1.setInt(1, k);
    cstmt1.execute();
    System.out.println(k + " " + cstmt1.getInt(1) + " " + cstmt1.getInt(2));
}
cstmt1.close();
```

### Cool

---

- + Database independent
- + Standards-based
- + Manages state (middle tier)
- + No client-side extensions
- + Priced per server, not per user

### Not so hot

---

- Slow (but only in beta)
- No development environment other than Java
- Nobody's heard of it

## What About the 800-Pound Gorilla?

- ▶ Internet Information Server with IDC
  - File-happy approach*
  - Optimized for SQL Server*
  - Could not get it to work properly with Oracle*
  - Not industrial strength*
- ▶ dbWeb
  - Jet-based administration tool...yuk*
- ▶ Watch out for "Denali"

## Parting Thoughts

Procrastination is just vision turned sideways

— *me*
